

Studio Rags Capstone Project | Requirements and Deliverables Mapping

Version 2.0 · 4 August 2026 · Aligned to SRS v1.0

This table links each user story to its functional requirement, non-functional requirement, acceptance criteria and related project deliverable. Requirement codes match the Software Requirements Specification version 1.0.

What changed since version 1.0 of this table

- The four-week Master Class has been added. It is paid in full in advance and taken within six months, so it is described in its own section (B).
- The offer list is now the final nine: three one-off workshops, three Master Classes, two online classes and the kids class. Tie-dye and Chunri have been removed.
- Prices and class sizes are now set by the client herself, and are recorded as a requirement rather than as information to be gathered.
- Stories that were missing have been added: password reset, confirmation and reminder emails, reviews, the contact page, admin notifications, overbooking prevention, privacy and consent, and accessibility.
- Stripe has been confirmed as the payment provider.

User story	Functional requirement	Non-functional requirement	Acceptance criteria	Related deliverable
A. Browsing and booking				
As a customer, I want to view the workshops on offer so that I can choose one that interests me.	FR-C1, FR-C2 — The system shall display all published offers with name, image, description, duration, price and upcoming dates, grouped by type: one-off workshop, four-week Master Class, online class, and kids class.	NFR-2, NFR-3 — The page shall be responsive and load within 3 seconds on a normal mobile connection.	All 9 offers are listed with correct information: Indonesian Batik, Japanese Shibori and Woodblock Printing as one-off workshops; the three matching Master Classes; Batik and Shibori online; and Kids & Parents Painting.	Workshop listing page, workshop cards, UI prototype.
As a customer, I want to see available dates and remaining places so that I can choose a session that suits me.	FR-C3 — The system shall display upcoming session dates, times and the number of places still available for each offer.	NFR-1, NFR-9 — The calendar shall be clear, keyboard accessible and usable on phone, tablet and desktop.	Available sessions can be selected. Full, cancelled and past sessions cannot be selected.	Workshop calendar, session selection page.
As a customer, I want to book a workshop so that I can reserve my place.	FR-C6 — The system shall allow a customer to select a session, enter participant and contact details, choose the number of places and submit a booking.	NFR-1 — The booking process shall be completed in a small number of clearly explained steps, and shall be completable one-handed on a phone.	A booking is created only when all required details are entered and enough places remain. The places chosen are removed from availability immediately.	Booking form, booking module, booking database tables.
As a customer, I want to pay securely online so that my booking is confirmed straight away.	FR-C7, FR-P1, FR-P2, FR-P3, FR-P5 — The system shall take full payment through Stripe before confirming a booking, and shall record the transaction reference and payment status. No deposits or part payments.	NFR-4 — All payment traffic shall use HTTPS. Card details shall never be stored in the Studio Rags database; they are handled entirely by Stripe.	The booking changes to confirmed only after Stripe reports a successful payment. The customer then sees an on-screen confirmation and receives a confirmation email. A failed or abandoned payment never produces a confirmed booking.	Checkout page, Stripe integration, booking confirmation page.
As a customer, I want to book an online class so that I can take part without travelling to the studio.	FR-C15 — The system shall offer Batik and Shibori as online classes, and shall provide joining details to the customer after payment.	NFR-4 — Joining details shall be visible only to the customer who booked that session.	An online booking is confirmed after payment and the joining details appear in the customer's account and confirmation email.	Online session booking flow, joining details email.
As a parent, I want to book the Kids & Parents Painting class so that I can attend with my child.	FR-C6 — The system shall support the Kids & Parents Painting class for children aged 7 to 15, and shall capture the child's details at booking.	NFR-7 — Children's details shall be collected only where necessary and handled in line with the privacy notice.	A parent can book the class, enter the child's details, and pay. The admin sees both the parent and child on the booking.	Kids class booking flow, admin booking view.
B. Master Class (new in this version)				
As a customer, I want to buy a four-week Master Class so that I can learn a craft in depth.	FR-C16 — The system shall sell a four-week Master Class for Batik, Shibori and Woodblock Printing, paid in full in advance, valid for six	NFR-4 — Payment shall follow the same secure process as a normal booking.	After successful payment the customer holds an enrolment recording four sessions and an expiry date six months ahead. A confirmation	Master Class purchase page, enrolment records.

User story	Functional requirement	Non-functional requirement	Acceptance criteria	Related deliverable
	months from purchase.		email is sent.	
As a Master Class student, I want to book my four sessions so that I can attend at times that suit me.	FR-C17 — The system shall allow an enrolled student to book sessions against the published schedule, using one of their four sessions instead of paying again.	NFR-5 — An enrolled student shall occupy a place in exactly the same way as a paying customer, so a class can never be overbooked.	Booking a session reduces the student's remaining sessions by one and reduces the class's available places by one. A student cannot book more than four, and cannot book after the expiry date.	Session redemption flow, enrolment records.
As a Master Class student, I want to see how many sessions I have left so that I do not lose them.	FR-C18, FR-C19 — The system shall show remaining sessions and the expiry date in the customer's account, and shall email a reminder before the enrolment expires.	NFR-1 — The remaining sessions and expiry date shall be visible without the customer having to search for them.	The account page shows sessions used, sessions remaining and the expiry date. A reminder email is sent before expiry.	Customer account dashboard, expiry reminder email.
C. Customer account and communication				
As a customer, I want to register and log in so that I can view and manage my bookings.	FR-C4 — The system shall allow a customer to create an account, log in, log out and view their booking history.	NFR-4 — Passwords shall be securely hashed. Login errors shall be clear without revealing whether an account exists.	A registered customer can log in with valid details and see only their own bookings. Invalid credentials are rejected.	Registration page, login page, customer account dashboard.
As a customer, I want to reset a forgotten password so that I can get back into my account.	FR-C5 — The system shall send a password reset link to the registered email address on request.	NFR-4 — Reset links shall expire after a short period and shall work once only.	A customer receives a reset link, sets a new password, and can log in with it. The old password no longer works.	Password reset pages, reset email.
As a customer, I want to view my booking history so that I can keep track of what I have booked.	FR-C10 — The system shall show the customer their past and upcoming bookings, with date, status and amount paid.	NFR-4 — A customer shall never be able to see another customer's bookings.	The account page lists the customer's bookings correctly, showing the amount they actually paid at the time of booking.	Customer account dashboard.
As a customer, I want to receive a confirmation and a reminder so that I do not forget my workshop.	FR-C8, FR-C9, FR-N1, FR-N2 — The system shall send an automatic confirmation email on booking, and automatic reminder emails before the session.	NFR-5 — Emails shall be sent reliably and every send shall be recorded so it can be checked later.	A confirmation email arrives after payment. A reminder email arrives before the session. Both contain the correct date, time and location or joining details.	Email templates, email sending service, email log.
As a customer, I want to leave a review so that I can share my experience with others.	FR-C11 — The system shall allow a customer who has attended a session to leave a rating and a comment, and shall display approved reviews on the workshop page.	NFR-7 — Reviews shall be moderated before they appear publicly.	Only a customer with an attended booking can review that workshop, and only once. Reviews appear publicly only after the admin approves them.	Review form, review moderation screen, workshop page reviews.
As a customer, I want to buy and redeem a gift card so that I can give a workshop as a present.	FR-C12, FR-P4 — The system shall allow a customer to choose a gift card value, enter recipient details, pay, and later redeem a valid code at checkout.	NFR-4 — Gift card codes shall be unique, securely generated and protected against reuse.	A digital gift card is issued only after successful payment. A valid unused code reduces the amount payable. Invalid, spent or expired codes are rejected.	Gift card purchase page, digital voucher, redemption module.
As a customer, I want to contact Studio Rags so that I can ask a question before booking.	FR-C13 — The system shall provide a contact page with a form that sends an enquiry to the admin.	NFR-4 — The contact form shall be protected against automated spam.	A submitted enquiry reaches the admin and is recorded in the system. The customer sees a confirmation on screen.	Contact page, enquiry records.
D. Administration				
As the administrator, I want to see today's and this week's classes so that I can prepare.	FR-A2, FR-A10 — The system shall provide a dashboard showing upcoming classes, a calendar, customer names, contact details, booking status and payment status.	NFR-1, NFR-6 — The dashboard shall be simple enough to use without training or developer help.	On opening the dashboard the admin can see upcoming classes and who is attending, without searching.	Admin dashboard.
As the administrator, I want to create and update workshops and dates so that customers see accurate information.	FR-A3, FR-A4 — The system shall allow the admin to create, edit, publish, cancel and remove workshops and individual dates.	NFR-4, NFR-6 — Only authorised administrators shall have access. Changes shall be saved reliably.	An admin can add or change a workshop or a date, and the change appears correctly on the public website.	Admin dashboard, workshop management module.
As the administrator, I want to set the	FR-A11 — The system shall allow the admin to	NFR-6 — Changing a price shall never	A price or place count set by the admin appears	Workshop and session

price and the number of places myself so that I do not need a developer.	set a default price and number of places for each workshop, and to change either for an individual date.	change what an existing customer has already paid.	immediately on the website. Existing bookings continue to show the amount originally paid.	management screens.
As the administrator, I want to be sure a class can never be overbooked so that I do not have to turn people away.	FR-A5 — The system shall prevent bookings beyond the number of places available, including when several customers book at the same moment.	NFR-5 — The system shall behave correctly under the higher booking volumes of the spring and summer season.	In a concurrency test, 50 simultaneous attempts on a class with 10 places produce exactly 10 confirmed bookings and no more.	Booking module, seat locking logic, load test report.
As the administrator, I want to view and manage bookings so that I can prepare for upcoming classes.	FR-A6, FR-A7, FR-A8 — The system shall display booking details, customer name, contact details, number of participants, session, payment status and booking status, with filtering.	NFR-3, NFR-4 — Customer data shall be accessible only to authorised users. Searching and filtering shall respond within 3 seconds.	The admin can filter bookings by workshop, date and status, and can update or cancel a booking where permitted.	Booking management dashboard, booking report.
As the administrator, I want to see who holds a Master Class enrolment so that I can manage the courses.	FR-A12 — The system shall list Master Class enrolments showing the student, sessions used, sessions remaining and expiry date.	NFR-6 — The admin shall be able to see and adjust an enrolment without developer help.	The admin can find any enrolment, see its remaining sessions and expiry date, and record an adjustment where needed.	Enrolment management screen.
As the administrator, I want to be notified of new bookings so that I always know what is coming up.	FR-A9, FR-N3, FR-N4 — The system shall email the admin when a booking is made, and before an upcoming class.	NFR-5 — Notification emails shall be sent reliably and recorded.	The admin receives an email for each new booking, and a reminder before each upcoming class.	Admin notification emails, email log.
E. Marketing, privacy and quality				
As the business owner, I want to collect customer email addresses so that I can tell people about new workshops.	FR-M2, FR-M3 — The system shall collect marketing consent separately from booking, provide a privacy and cookie notice, and allow the admin to export the consented list.	NFR-7 — Consent shall be explicit and recorded with a date. Personal data shall be handled in line with Australian privacy expectations.	A customer can book without agreeing to marketing. Only customers who opted in appear in the exported list, each with a recorded consent date.	Consent capture, privacy notice, customer export.
As a customer with limited eyesight or dexterity, I want the site to be easy to use so that I can book without difficulty.	FR-C14 — The site shall be designed for phones first and shall work across common browsers and devices.	NFR-9 — The site shall meet WCAG 2.2 Level AA: readable text sizes, sufficient colour contrast, visible focus indicators and full keyboard operation.	An accessibility audit records no Level AA failures on the booking journey. The whole booking can be completed using a keyboard alone.	Design system, accessibility audit report.

Still to be confirmed with the client: how the Master Class runs in the studio (section B), the cancellation and refund policy, how online class materials are provided, and how Kids & Parents Painting tickets are priced. These are listed in section 7 of the SRS v1.0.
