

Studio Rags Requirements and Deliverables Mapping

This table links each user story to its functional requirement, non-functional requirement, acceptance criteria and related project deliverable.

User story	Functional requirement	Non-functional requirement	Acceptance criteria	Related deliverable
As a customer, I want to view available workshops so that I can choose a workshop that interests me.	The system shall display all active workshops with the workshop name, image, description, duration, price and upcoming dates.	The workshop page shall be responsive, readable and load within 3 seconds under normal conditions.	Customers can view Indonesian Batik, Japanese Indigo Shibori and Woodblock Printing with correct and complete information.	Workshop listing page, workshop cards and UI prototype.
As a customer, I want to view available workshop dates and seats so that I can select a suitable session.	The system shall display upcoming session dates, times and the number of available seats for each workshop.	The calendar shall be easy to understand, accessible and usable on desktop, tablet and mobile devices.	Available sessions can be selected. Full, cancelled or unavailable sessions cannot be selected for booking.	Workshop calendar and session-selection page.
As a customer, I want to book a workshop so that I can reserve my place.	The system shall allow customers to select a session, enter participant and contact details, choose the number of seats and submit a booking.	The booking process shall be simple, reliable and completed in a small number of clearly explained steps.	A booking is created only when all required details are entered and enough seats are available. The selected seat quantity is deducted from availability.	Booking form, booking module and booking database tables.
As a customer, I want to pay securely online so that I can confirm my booking immediately.	The system shall integrate a secure payment service, process the payment and record the transaction reference and payment status.	Payment processing shall use HTTPS and a recognised payment provider. Card details shall not be stored directly in the Studio Rags database.	After successful payment, the booking status changes to confirmed and the customer receives an on-screen confirmation and confirmation email.	Checkout page, payment integration and booking-confirmation page.
As a customer, I want to register and log in so that I can view and manage my bookings.	The system shall allow customers to create an account, log in, log out and view their booking history.	Passwords shall be securely hashed. Login errors shall be clear without revealing sensitive account information.	A registered customer can log in with valid details, access their account and view their own bookings. Invalid credentials are rejected.	Registration page, login page and customer account dashboard.
As an administrator, I want to create and update workshop sessions so that customers can see accurate information.	The system shall allow an administrator to create, edit, publish, cancel and delete workshops and workshop sessions.	Only authorised administrators shall have access to workshop-management functions. Changes shall be saved reliably.	An administrator can add or update workshop information, and the approved changes appear correctly on the customer-facing website.	Admin dashboard and workshop-management module.
As an administrator, I want to view and manage customer bookings so that I can prepare for upcoming workshops.	The system shall display booking details, customer names, participant numbers, selected session, payment status and booking status. The administrator shall be able to filter and update bookings.	Customer data shall be accurate, protected and accessible only to authorised users. Search and filtering should respond within 3 seconds under normal conditions.	The administrator can view and filter bookings by workshop, date and status, and can update or cancel a booking where permitted.	Booking-management dashboard and booking report.
As a customer, I want to purchase and redeem a gift card so that I can give a Studio Rags workshop experience to another person.	The system shall allow customers to select a gift-card value, enter recipient details, complete payment and redeem a valid gift-card code during checkout.	Gift-card codes shall be unique, securely generated and protected against unauthorised reuse.	A digital gift card is issued only after successful payment. A valid unused code reduces the checkout amount, while invalid or expired codes are rejected.	Gift-card purchase page, digital voucher and gift-card redemption module.
